

Panel on OO-VHDL

Peter Ashenden

The University of Adelaide

*currently Visiting Scholar at
The University of Cincinnati*

partially supported by Wright Laboratory
under USAF contract F33615-95-C-1638

OO-VHDL — The Question

3) Is there a crisp statement of the problem that
OOVHDL is trying to solve?

- Yes, several!
- *cf* experience in the software engineering world
 - key problem: **managing complexity**
- Improved expressiveness for modeling
 - at all levels of abstraction, not just high-level
 - ADTs: data abstraction, encapsulation
- Reusability
 - of ADTs and components
 - inheritance with polymorphism, genericity

OO-VHDL and VHDL-200X

2) Is OOVHDL really separate from VHDL-200X?

- No, must be cleanly and seamlessly integrated
 - But no penalty imposed if OO/genericity not used
- Divergence would hurt everyone
 - confusion about what VHDL is
 - dissipation of effort

OO-VHDL Market

1) What is the market for OOVHDL, separate from that of VHDL in general?

- not separate!
- system-level modeling
 - behavioral modeling early in the design flow
- behavioral synthesis
- hardware/software codesign

SUAVE

- Adopt Ada-95 features for OO and genericity
 - see papers
- Working on system-level behavioral modeling
 - generalizing concurrency and communication
